Table of notes

Notes	Old text	New text
Plots, as well as overall presentation could be improved to enhance clarity as well as indicators of the statistical accuracy of the numerical results (confidence intervals, etc.).	<u>P.9, col.1, 3d paragraph from the top:</u> For each combination of the problem parameters, the experiments were conducted 10 times, and then we calculated the average value. Fig. 7, 8, 9 are changed.	For each combination of the problem parameters, the experiments were conducted 10 times, and then we calculated the average value. <mark>At the same time the dispersion of values in statistical selection did not exceed 10 percent.</mark>
